INDICE DI RIFLETTANZA SOLARE / SOLAR REFLECTANCE INDEX (SRI)

Per valutare le proprietà radiative dei manti di copertura in laterizio è fondamentale determinare le proprietà di RIFLETTANZA (R), EMISSIVITA' e, quindi, l'indice SRI (Solar Reflectance Index) ai fini di specifiche verifiche richieste dalla legislazione cogente e da protocolli ambientali volontari. I valori riportati sono relativi ad una tegola tipo.

In order to evaluate the radiative properties of clay roofing tiles, it is essential to determine the properties of REFLECTANCE (R), EMISSIVITY and, therefore, the SRI index (Solar Reflectance Index) for the purpose of specific verifications required by the binding legislation and voluntary environmental protocols. The given are relative to a standard roof tile.
